CAPABILITY PROFILE

Your engineer in China.

I work as a China sourcing agent for machinery builders. I check supplier quotes, samples and delivery commitments, then put my findings in writing for your purchasing and engineering teams.

THREE DECISIONS I CAN HELP YOU MAKE

Before a deposit

Which quote covers the drawing?

I put material, heat treatment, inspection, tooling and delivery terms side by side. You can see which differences need a written reply.

Before production

Can we release this sample?

I compare the supplier's readings with your drawing revision, flag exceptions and identify what your quality team needs to sign off.

When a date slips

Is the revised date workable?

I ask which operation sets the date, what overtime would change, who pays and when the supplier can show progress.

ENGINEERING BACKGROUND

Mechanical and electrical engineering background. Independent sourcing advisor since 2018. My work with Italian machinery buyers includes stainless conveyor chain and machined carbon-steel parts.

WAYS TO WORK TOGETHER

Written assessment

One question, a defined evidence set and a recommendation you can circulate.

Project support

Supplier checks, sample review and follow-up against agreed milestones.

Ongoing support

A monthly scope naming the suppliers, open orders, visits and reporting cadence.

For a free fit check, email the part, decision and deadline. I will confirm scope and fees before paid work starts. We can agree how to share drawings after first contact.
